BuildCore

CONSTRUCTION ERP · VERSION 2.48

One system for the site, the store, billing, cash and the books

For contractors in Nepal: road, building, hydropower, bridge, water and trading work, from the daily progress report to the balance sheet, on your own computers.

Nepali fiscal year & BS dates | VAT & TDS | Tally-style accounts | NFRS assets | DoR / DUDBC norms | FIDIC & PPMO claims | Works offline

WHY BUILDCORE

The problems it solves, and how

Most contractors run each site in Excel, keep store registers on paper and do the books in a separate package. The figures never meet: profit is known only at year end, and a cash shortage only when salaries are due. BuildCore puts all of it in one database, so every figure comes from the work itself.

× Profit known only at year end

One project position on every screen: cost to date, value earned, cost to complete and forecast profit per BOQ item, every month.

Control budget from rate analysis · CVR · monthly close signed by QS, accounts and PM

× Every site reports differently

One Universal DPR for roads, buildings, hydropower, bridges and more. Site and engineer quantities side by side; one approval updates progress, cost and logsheets.

9 templates · work fronts · issue register · 15 DPR reports

× Machine hours typed twice, never agree

Machine lines fill themselves: opening = last closing, operator from the register, hours as you type, idle or breakdown asked. Logsheets build from the DPR.

Hours & output per attachment · Machine P&L · hire bills from approved hours only

× Store at site and accounts never agree

Three-way match links what arrived (GRN), what the vendor billed (VAT bill as printed) and what was paid, and lists every gap.

Part-billed goods · "other item" bills · purchases without VAT bill · Bill vs actual for the auditor

× Billing late and incomplete

Work done but not billed is on the dashboard; the IPC fills from measurements, and every IPC is followed from submission to cash.

Billing pipeline · receivables in five buckets · collection actions

× Profitable on paper, short of cash

A 13-week cash forecast shows the gap before it happens, with the eight actions that close it and the cost of any loan.

Payment requests with approval chain · payment plan puts tax and wages first

× The same BOQ item scattered over locations

BOQ by location with short codes (HW-M25, SB-M25): totals per item, and the code works in the DPR, store, procurement and billing.

Import BOQ with locations · summary by item · checks for double counting

× Accountants miss Tally, managers miss controls

Tally-style Gateway on the same books: F4–F7 vouchers, bill-wise, cost centres, Tally groups, with audit lock date and an Edit Log.

Maker and checker · papers before posting · one depreciation per machine

HOW IT WORKS

Each step starts from what the step before produced

Nothing is typed twice. A DPR approved at site becomes progress, labour and machine cost and the logsheet; a goods receipt becomes stock and the supplier's liability; a certified IPC becomes the client invoice with VAT, TDS and retention.

Plan
WBS, schedule, BOQ by location, rate analysis, control budget

Execute
Daily progress report, labour, machines, issues, quality

Supply
Requisition, PO with past prices, GRN, issue

Measure
Quantities accepted, checked against work done

Bill
IPC with VAT, TDS, retention, advance

Account
Vouchers post themselves; Tally-style entry

Control
Cash 13 weeks, profit, alerts, monthly close

14
modules from site diary to balance sheet

170+
screens, each shown only to the jobs that need it

1
database: one ledger, one stock, one truth

0
internet needed; your data stays in your office

Dashboard
Needs attention, This month, command centre, decision centre, alerts

Tools & views
Report generator (42 sources), KPIs, site mode, AI copilot

Site work & DPR
Universal DPR, schedule, quality, drawings, RFIs, safety, document library

Commercial & billing
BOQ, measurements, IPC, variations, contracts, claims register, CVR, close

Store & inventory
Requisition, GRN, issue, return, transfer, count, reconciliation

Procurement
PR, quotation comparison, PO, bills, three-way match, trading

Accounts
Tally Gateway, payments, wages, petty cash, bank import, VAT, TDS, cash forecast

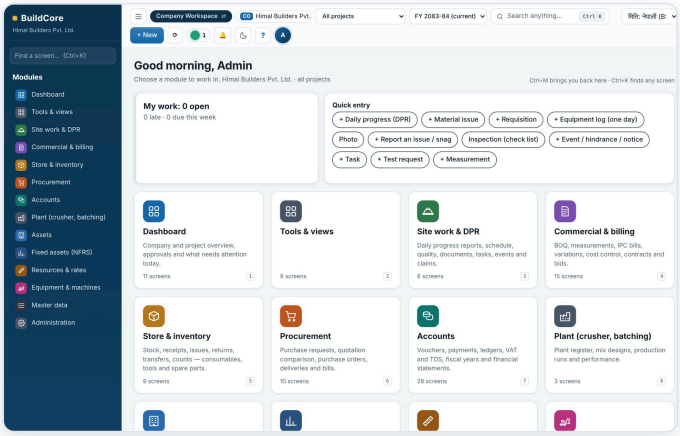

Equipment & machines
Register, logsheets, maintenance, hire, cost per hour, machine P&L

Plant
Crusher and batching: mix designs, production runs at real cost

Assets & Fixed assets (NFRS)
Capital register, depreciation, leases, impairment, tax, PPE note

Resources & rates
1,740 DoR / DUDBC / electrical / sanitary norms, rate books, hire rates

Master data & Administration
Projects, materials, parties; users by job and project, backups, audit log

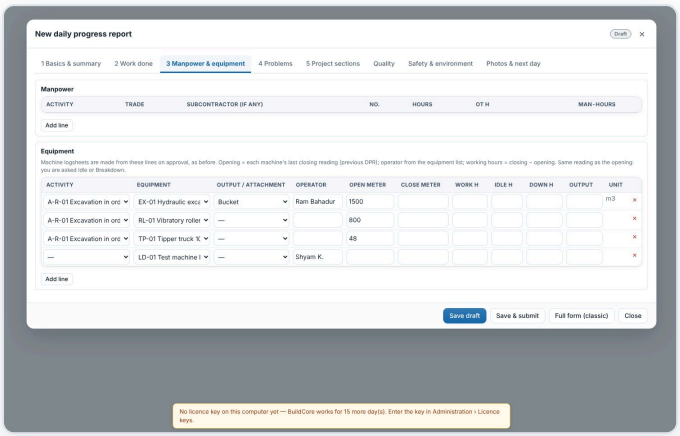

Simple for every person

- Each person gets a **job** (storekeeper, site engineer, QS, accountant…) and **where they work**: head office or chosen sites.
- A storekeeper sees store screens, an accountant sees accounts; nobody wades through 170 screens.
- Site people land straight in their project. Company people see the whole company.
- Tally keys, AD or BS dates, Paste from Excel on every list, Ctrl+K to find anything.

WHAT IT CAN DO

From the site to the board room

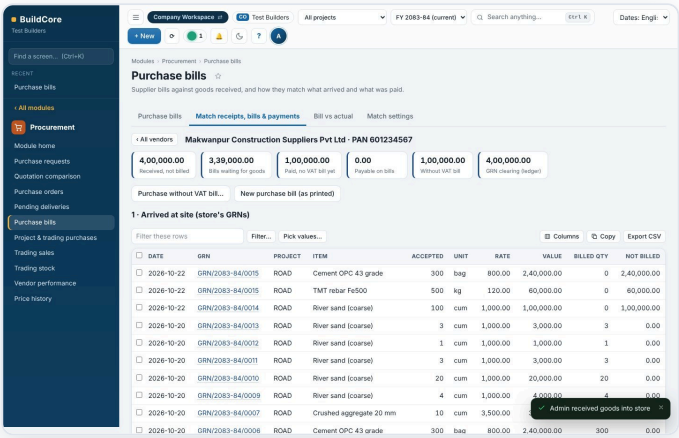

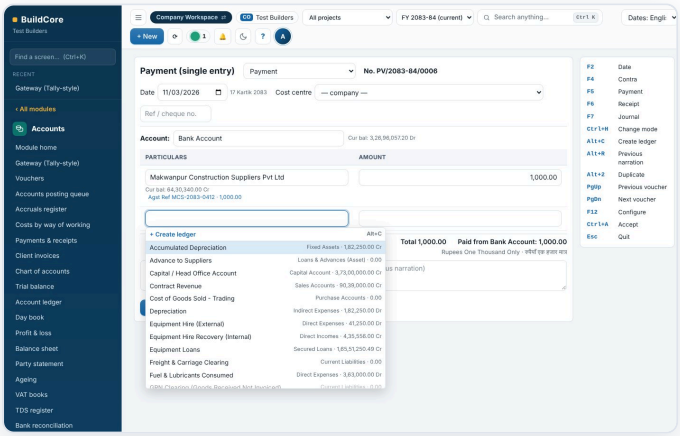

Universal DPR with machines that fill themselves

- One report per project, date and shift, with the project's own template.
- Site reports, QS accepts: scope, cumulative and balance per BOQ line.
- Opening meter from the last closing, operator from the register, idle or breakdown asked.
- Approval updates progress, cost, logsheets, events and quality tests in one go.

Three-way match NEW

- Store enters what arrived; accounts types the VAT bill exactly as printed.
- Link each bill line to the goods, even "other item" lines, with reason and approval.
- Stock carries the real rate; the VAT register shows the bill as printed.
- Goods not billed, bills without goods and cash paid without bill, per vendor.

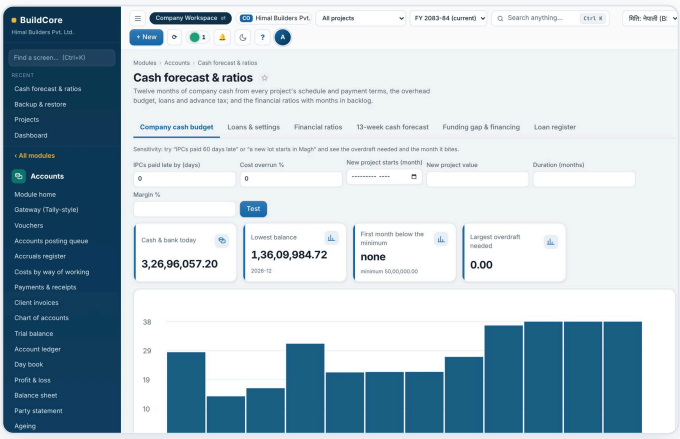

Tally-style accounting on the same books NEW

- Gateway with V, K, T, P, B keys; F4–F7 vouchers; Ctrl+A to accept.
- Bill-wise New Ref / Agst Ref, TDS by section, cost centre by project, BOQ item and machine.
- Your own voucher types and numbering per project; amount in words in Nepali.
- Audit lock date and an Edit Log of every change.

Cash and profit you can trust

- 13-week cash forecast from bills, IPCs, payment requests, wages, tax and loans.
- Funding gap with the actions that close it and the cost of financing.
- Financial command centre and 16 alerts with owner, target and escalation.
- Forecast profit only where a cost estimate exists, never a false 100%.

CONTROL AND TRUST

Your data stays yours, and stays right

Cancel, never delete

Posted documents are reversed; numbering is gapless per fiscal year.

Maker and checker

The person who writes a voucher, payment request or correction cannot approve it.

Locks

Month locks, year close and an audit lock date on every screen.

Papers with transactions

Bills, payments and large vouchers can require their scan before posting.

30+ data checks

Stock = books, debtors and creditors = open bills, no double depreciation or double charge.

Backups and safe updates

Daily backups; every update tested on a copy of your data and rolled back on failure.

WORKS WHERE YOU WORK

One office

One computer keeps the data; every computer, tablet and phone in the office connects to it.

Office, site and owner

A free private network joins them to the same database, or the server edition runs on the cloud for 80+ users.

Site with no internet

The site sends a pack file by pen drive or e-mail; head office checks and posts it.

WHO USES IT

- **Director**: dashboard, cash, profit by project, approvals
- **Project manager**: DPR approval, programme, budget, POs
- **Site engineer / supervisor**: DPR, requisitions, quality, issues
- **Quantity surveyor**: accepted quantities, measurements, IPC, claims
- **Storekeeper**: GRN, issues, transfers, counts
- **Procurement officer**: PR, quotations, POs with past prices
- **Accountant**: posting queue, bills, payments, bank, VAT, TDS
- **Equipment manager**: logsheets, maintenance, hire, cost per hour

GETTING STARTED

1 Install
One setup file; no administrator rights or internet.

2 Activate
Send the request code, enter the licence key.

3 Set up
Company, people by job and site, accounts, projects.

4 Load
Opening balances and stock, BOQ with locations, machines.

5 Go live
Sites enter DPRs and store documents; accounts posts.

6 Close
Two monthly closes on a pilot project, then all.

You need a 64-bit Windows 10 or 11 computer to keep the data, and any computer, tablet or phone with a browser to connect to it. Existing users update from any version since 1.6 with one file and keep every record.

See it on your own project

Bring one BOQ and one month of site records. We load them and show you the DPR, the bill, the books and the margin in one sitting.
